Subject: organic material

Ken At a meeting last evening the board decided to proceed with the liming as scheduled and to hold off on the organic fertilization until the Spring --the main reason was that we were unsure what was going to happen to the rest of the property(which was not fertilized) we all appreciate the excellent work both you and the members are doing and certainly encourage you to continue, but would like a more detailed plan of what you prepose for the entire property, over the winter perhaps that will be accomplished and we'll begin anew at that time. Let me know should you have any questions Bob
